

REPLACEMENT CLAIMS

Please cancel claims 44 and 45, and substitute the following claims for the pending claims with the same number.

1. (Amended) A method for delivering a calling party's location comprising:
receiving a call at a called party's central office, wherein data associated with the call includes a directory number of the calling party;
triggering a query to a service control point from the central office;
in response to the query, retrieving, by using the service control point, location information associated with the calling party;
returning the location information to the central office; and
terminating the call and delivering the location information to the called party.

17. (Amended) A system for delivering a calling party's location information, the system comprising:

an address database cross-referencing location descriptions with directory numbers;
a service control point in communication with the address database; and
a called party's central office that receives a call from the calling party, wherein data associated with the call includes a directory number of the calling party,
wherein the service control point is adapted to, in response to a query received from the central office, search the address database for a location description corresponding to the directory number, and to forward the location description to the central office, and

cont
wherein the central office terminates the call and delivers the location description to the called party.

18. (Amended) The system of claim 17, wherein the query is a query for routing instructions, the service control point is adapted to provide routing instructions, and the service control point returns routing instructions with the location description to the central office, which forwards the location description to a display unit.

33. (Amended) A service control point for delivering a calling party's location information, the service control point comprising:

Sub

A3
a first communication link for receiving a query requesting location information of a network device, the query including a directory number of the network device; and

a second communication link to an address database that cross-references calling party location information with directory numbers,

wherein the query is sent from a called party's central office that receives a call from the network device, wherein the service control point is adapted to, in response to the query, search the address database for the calling party's location information corresponding to the directory number and to return a response message to the called party's central office with the calling party's location information.

38. (Amended) A system for delivering a calling party's location information, the system comprising:

an address database that lists directory numbers and their associated locations;
a service control point in communication with the address database; and
a wireless network having a location system that tracks locations of wireless network devices,

wherein the service control point is adapted to, in response to a query received from a called party's central office, wherein the called party's central office receives a call from the calling party, search the address database using a directory number associated with the calling party, and to forward an associated location of the directory number to the central office, and wherein the location associated with the calling party is updated by the location system.

42. (Amended) A method for delivering a wireless calling party's location as part of a calling name delivery service, the method comprising:

receiving at a called party's central office a call to a subscriber of the calling name delivery system, the call including a directory number of the wireless calling party;
triggering a query from the central office to a service control point requesting call routing instructions;

in response to the query, retrieving, by using the service control point, a location and a name of the calling party using the directory number;

if the location is raw, translating the location into displayable form;

returning the call routing instructions, the name, and the location to the central office;

forwarding the call, the name, and the location to the subscriber; and
